ASTRAMIND LABS

MASEWERA265

Malawi's Digital Home for Sport

PUBLIC FRONTEND PROFILE

A responsive multi-sport experience for competitions, athletes, events and sporting communities across Malawi.

PRODUCT & DELIVERY PROFILE | 13 OCTOBER 2026

01

Purpose and direction

One public experience for the breadth of Malawian sport.

Masewera265 is the public digital gateway to organized sport across Malawi. Developed by AstraMind Labs, its frontend connects competitions, teams, athletes, fixtures, results, statistics, venues, organizations and news through a clear, mobile-first browsing experience.

The website should serve national, regional, district and community interests, including school, university and disability sport. Its identity represents the complete platform, with football as the first functional implementation and netball as the next expansion.

Vision

Make Malawian sport accessible by discipline, place, competition, participant and season.

Delivery responsibility

The COO leads public frontend delivery under the supplied development brief. Backend architecture and data ownership remain separate.

Frontend objectives

- Establish a credible, recognizable multi-sport identity.
- Provide quick access to available fixtures, results and ongoing events.
- Connect public sporting records through shared navigation and search.
- Support local discovery and historical browsing where records exist.
- Work efficiently on smartphones and variable networks.
- Deliver reusable components and working, documented software.

Reading guide: 02 Coverage · 03 Experience · 04 Pages · 05 Event formats · 06 Design · 07 Data & trust · 08 Delivery

02

Every sport. Every community.

The interface supports expansion across all organized sports in Malawi.

Coverage group	Sports and participation
Team sports	Football, netball, basketball, volleyball, cricket, hockey and rugby.
Individual and other disciplines	Athletics, boxing, tennis, cycling, swimming, golf and chess.
Participation settings	School sports and university sports across relevant disciplines.
Inclusive participation	Disability sport across relevant disciplines.
Further coverage	Other organized sports as approved and introduced.

School, university and disability sport are cross-cutting discovery categories. A school netball event, for example, should be discoverable by both its sport and its participation setting.

SPORT + PLACE + PARTICIPATION

Illustrative discovery combination; it does not assert an existing competition record.

Coverage states

Functional: connected to supported published records. Limited: only selected information is available. Preview: a forthcoming experience with clearly labelled demonstration content.

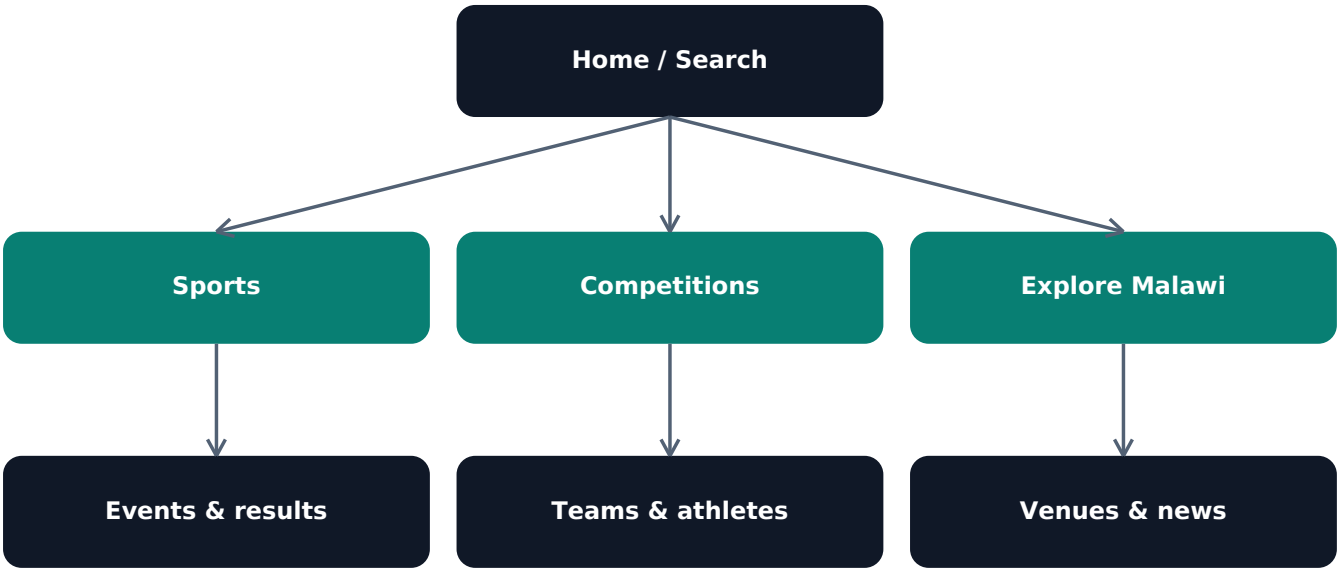

03

The public experience

Fast routes from discovery to useful sporting information.

Audience	What the frontend helps them do
Supporters	Check fixtures, ongoing events, results and news.
Athletes and followers	Explore participants, affiliations and published performances.
Schools, universities and clubs	Find institutional activities and connected sporting records.
Media and researchers	Browse statistics, season history and source information.
Prospective partners	Understand the platform and its public coverage.

NAVIGATION & CONNECTED DISCOVERY

Core public browsing requires no account. Search groups results by supported entity type, and useful filters should persist when users return to a listing.

04

Pages that connect the platform

A consistent public structure with clear purposes for each screen.

Page	Purpose and principal content
Homepage	Introduce the platform; sports selector, available ongoing events, fixtures, results, news, competition and local-discovery links.
Sports directory	Show every approved sport and its availability. Sport pages organize relevant competitions, events, participants and stories.
Fixtures & results	Browse events by sport, date, competition, location, status and supported participation category.
Competition pages	Identity, organizer, season, fixtures, results, participants and suitable tables, rankings or brackets.
Teams & clubs	Identity, supported squads, competition participation, fixtures, results and season history.
Athlete profiles	Approved public identity, sport, affiliations, performances, career history and related news.
Venues & organizations	Locations, associated events and connections to governing bodies, clubs, schools and universities.
News	Published stories organized by sport, location and related records; dates, sources and approved media credits.
Explore Malawi	Discover available sporting records by region, district and locality using supplied classifications.
About & coverage	Platform purpose, AstraMind Labs, coverage limits, trust labels and approved contact or correction channels.

Initial integration follows available endpoints. Unsupported directories may use explicitly labelled preview layouts until their public records are supplied.

05

An event centre for every format

Shared event identity, with presentation adapted to each sporting discipline.

Every event centre presents available participants, competition, season, scheduled time, venue, status, outcome and source information. Its detail sections adapt to the sport rather than assuming every event is a two-team match.

Sport / format	Appropriate detail sections
Football	Scoreline, available events, lineups and match statistics.
Netball / basketball	Team scores, periods or quarters, and supported player statistics.
Athletics / swimming	Discipline, entrants, heats, finals, positions and recorded performances.
Boxing	Competitors, bout details and published outcome.
Tennis	Sets, scores and available match progression.
Other sports	Results, rankings and measurements supplied for that format.

SHARED FOUNDATION / CONFIGURABLE PRESENTATION

Presentation rules

Use sport-appropriate terminology and units. Display schedule timezone clearly. Preserve season context. Show missing data as unavailable; never invent scorers, statistics, entrants or event records.

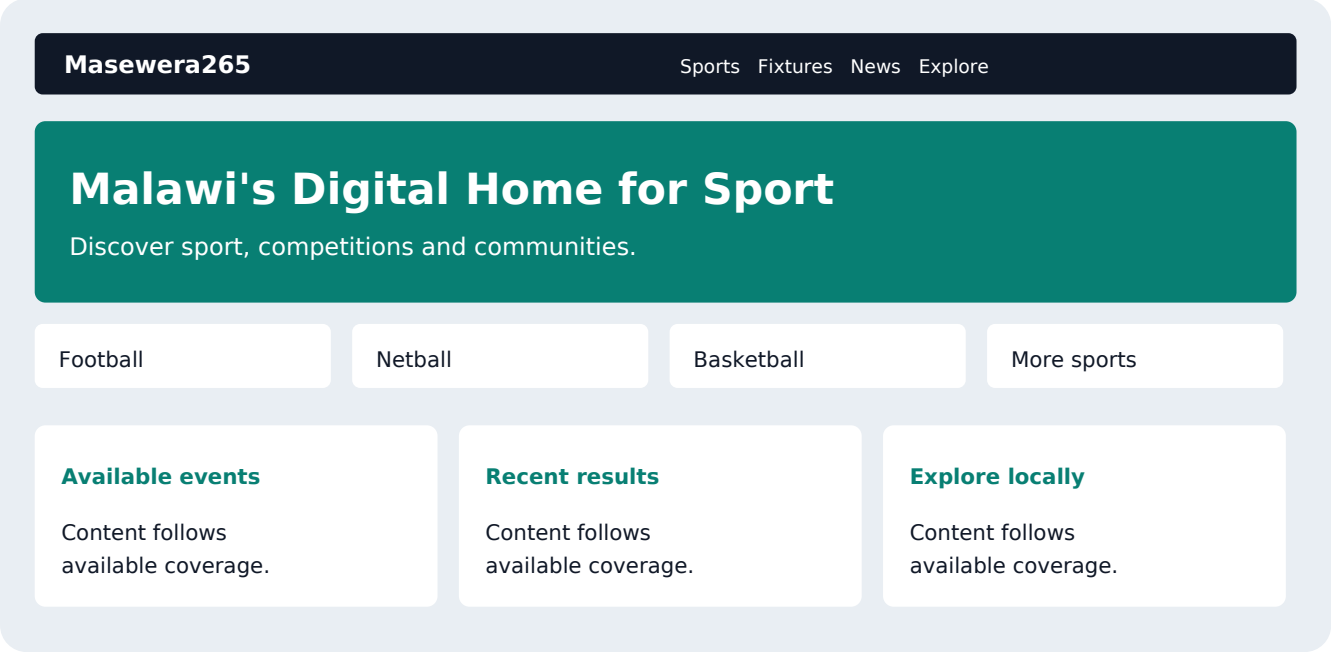

06

A professional visual identity

Navy foundations, teal actions and amber highlights.

The website should feel energetic, credible and organized. Its visual hierarchy prioritizes participants, scores, dates and competition names. Approved photography and restrained animation support the information rather than compete with it.

Navy	Teal	Amber	Mist
#101827	#087F73	#F4B942	#F4F7FA

Conceptual homepage layout. This illustration represents interface structure, not a released website or live sporting data.

Mobile-first quality

Use readable type, comfortable touch targets, accessible menus, keyboard focus and sufficient contrast. Optimize images, minimize heavy assets, respect reduced motion and provide useful feedback on slow connections.

07

Data, trust and frontend boundaries

The frontend renders supplied records and communicates their status.

Trust label	Backend-supplied meaning
Official	Confirmed directly by the relevant body, club or organizer.
Verified	Confirmed by Masewera265 using reliable cross-checked sources.
Reported	Submitted and awaiting independent confirmation.
Unverified	Community-submitted information awaiting review.

Trust, event lifecycle and freshness are separate indicators. Demonstration content uses its own visible label and must not imply real verification. Where timestamps exist, show the last update and communicate refresh failures.

FRONTEND DATA PRESENTATION

React / Next.js and TypeScript form the proposed foundation. Shared components, sport-specific views, domain types and data-access services remain separate. Private credentials stay outside browser bundles and public repositories.

Football demonstrations use API-Football/API-Sports and Sportmonks through the path coordinated by the backend lead, subject to access and coverage. This does not establish complete coverage of Malawian competitions.

Required interface states: loading, empty results, unsupported fields, request failure with retry, stale information and labelled previews. Backend collection, verification decisions, reconciliation and reporter workflows remain outside frontend delivery.

08

Delivery and readiness

Working software with clear integration dependencies and review criteria.

Milestone	Reviewable output
01 Foundation	Running application, routes, shared layout and setup instructions.
02 Visual system	Responsive components and approved design direction.
03 Multi-sport presentation	Homepage, sport directory and clearly labelled previews.
04 Football experience	Fixtures, results, ongoing matches and event-centre screens.
05 Public directories	Competition, team and other agreed profile layouts.
06 Integration	Supported endpoints connected; field mappings and failure states verified.
07 Handover	Primary journeys checked, critical defects resolved and limitations documented.

Acceptance criteria

- Navigation and agreed public routes work on mobile and desktop.
- Supported records display accurately; previews remain clearly labelled.
- Different sporting formats use appropriate components and terminology.
- Loading, empty, unavailable, error and stale states are implemented.
- Essential accessibility checks and agreed type, lint and core tests pass.
- No private credentials appear in browser code or repository files.
- Setup, configuration, dependencies and known limitations are documented.

09

Scope and source notes

A multi-sport identity with a phased functional release.

Area	Initial delivery commitment
Identity and navigation	Represent the full Malawian multi-sport vision.
Football	Partially functional browsing using supplied supported data.
Remaining sports	Preview pages and representative layouts; netball is the next functional expansion.
Other public entities	Layouts for athletes, venues, organizations and news; connect where endpoints are supplied.
Discovery and history	Interface structure, with functionality dependent on published records.
Search	Only the entity categories supported within agreed scope.

Ownership and handover

The frontend lead owns visual design, navigation, responsive behaviour, components and integration with supplied services. The backend lead supplies published records and their verification or update status. The first deliverable is a working public website suitable for internal review and subsequent demonstration.

Sources and editorial notes

1. Masewera265_Team_Meeting(1).pdf - supplied team meeting deck. Source for multi-sport vision, coverage roadmap, discovery, historical browsing, trust labels and phased growth.

2. Pasted text(20261013-163953).txt - supplied Public Frontend Development Brief for the COO. Source for frontend ownership, proposed technologies, football demonstration APIs and current preview scope.

This profile combines the meeting vision with the current frontend brief. Proposed navigation, layouts and presentation rules are implementation recommendations. Delivery dates and unsupported capabilities require team agreement. No current third-party coverage or operational service is asserted.
